

Eliminate Paperwork and Save Time

JTS, or Job Tracking System, designed to convert complicated process into simple task

Mikhail Tsinadze is a woodworker, with over 25 years of experience in the field. 20 years ago, he founded Drafting & Design by Mikhail, a drafting and engineering company helping woodworking shops with their shop and submittal drawings. As his company grew over the years, the need for a serious business management system and software became a real problem. After years of research, trial and mistakes, Mikhail decided not to look any further, but instead develop his own solution. That's when **NEGESCO** – New Generation Software Company started. Mikhail founded the software development company in 2015, with one thing in mind, to develop simple but complex solution for woodworkers to help manage all aspects of the business from A to Z.

JAMP Systems was released in August 2018, after more than three years of intensive development.

Darrel Tsinadze, Mikhail's son is a college student and a young software developer. He has been helping his Father throughout process, from developing the software, working on the software, testing, and the implementation. Mikhail and Darrel will discuss the different aspects of JTS (Job tracking system) and using JAMP to manage your projects.

JAMP is a web based cloud system. It gives you the ability to access your databases, track your jobs, generate reports, proposals, invoices ,and AIA forms whenever you are. You are not limited by your local machine or server.

- Save time and increase your income by eliminating paperwork and going digital.
- Calculate most complicated proposals and its material cost in minutes.
- Create quotes with items from vast woodworking libraries
- Distribute jobs
- Create work orders and track job progress with our innovative JTS (job tracking system)
- See detailed statistics and many more with JAMP Systems
